

MBBKA Wild Flower Seed Packet

There should be enough seed to cover 1 square metre.

- Remove all existing weeds and other material, if necessary use an appropriate weed killer.
- Wildflowers prefer a poor soil with low nutrients, if practical remove any good quality top soil.
- Once the weeds have been removed prepare soil to a fine tilth ready for sowing your wildflowers.
- Try not to disturb the soil any further as this may bring more weed seeds to the surface.
- Sowing times can be any time during the period end-March - end October the ideal time being autumn, but avoid the hot summer months.
- Spread evenly over the area.
- The nurse grasses will appear within 7 - 10 days; the wildflowers may vary depending upon species - some may take only a few weeks, while others can take several months.
